A,Note: the first intron occurs before the initiator codon
C;Complex: heterodimer and higher complexes with calgranulin A (see PIR:BCHUCF)
C;Complex: heterodimer and higher complexes with calgranulin A (see PIR:BCHUCF)
C;Superfamily: 5-100 protein; calmodulin repeat homology
C;Keywords: blocked amino end; calcium binding; EF hand; heterodimer; inflammation; phos.
F;2-114/Product: calgranulin B #status experimental <MAT>
F;10-44/Domain: calmodulin repeat homology <EF1>
F;2/Modified site: blocked amino end (Thr) (in mature form) (probably acetylated) #status
F;113/Binding site: phosphate (Thr) (covalent) #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A,Accession: D54327
A,Molecule type: protein
A,Rolecule type: protein
A,Rote: in several peptide samples no PTH was detected for 95-His but in one peptide PTH
C;Comment: This protein appears to be expressed only in cells of myeloid origin actively
C;Comment: The presence of 3'-methylhistidine at position 105, corresponding to 107-His
C;Genetics:
A;Gene: GDB:S100A9; 60BBAG; CAGB; CFAG; LIAG; MAC387; MIF; MRP14; NIF; P14

"Amino acid sequence of an immunogenic corneal stromal protein.";
Invest. Ophthalmol. Vis. Sci. 37:944-948 (1996)
-i- SIMILARITY: Belongs to the S-100 family.
                                                                            molecule.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

Calgranulin B (Neutrophil cytosolic 23 kDa protein) (P23) (BEE22)
J. Biol. Chem. 271:19802-19809(1996).
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

--- TISSUE SPECIFICITY: Found essentially in phagocytic cells.
--- PIM: Phosphorylated by protein kinase C.
--- SIMILARITY: Belongs to the S-100 family.
--- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                      InterPro; IfR001751; CaBP_S100.

MIYABAKI MILARITY: Balongs to the since of protein complex, calprotectin, against Capnocytophaga sputigena.";
C.I. FUNCTION: Expressed by macrochages in acutely inflammated tissues and in chronic inflammations. Seem to be an inhibitor of protein kinases. Also expressed in epithelial cells constitutively or intermediate filaments in monocytes and epithelial cells.
C.I. MISCELLANEOUS: Has been shown to bind calcium.
C.I. SIMILARITY: Balongs to the S-100 family.
C.I. SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. -! MASS SPECTROMETRY: MW=13069; MW_ERR=2; METHOD=Electrospray;
RANGE=1-112; NOTE=Ref.2.
-! SIMILARITY: Belongs to the S-100 family.
-! SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                               SEQUENCE FROM N.A.

-!- SUBUNIT: Homodimer. Interacts with S100Z.
-!- MISCELLANEOUS: This protein binds two calcium ions.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      786E6E3F3EACC6C1 CRC64;

This sequence represents the CAAFI calcium-binding protein isolated from bovine amniotic fluid. CAAFI belongs to the S100 protein family, which lincludes calcyclin, MRPB, and MRPP4. Intracellular calcium ion concentration is one of the Key factors for intracellular signal transduction. The calcium signals are transduced by various calcium-binding proteins, such as the protein encoded by this sequence. CAAFI is normally expressed in squamous epithelial cells, neutrophils and macrophages, but atypical epithelial cells, neutrophils and overexpression is observed in several types of cancer cells and cautrophils/macrophages infiltrating cancerous lesions. Detection of CAAFI (using antibodies in usual immunoassays) can be used to diagnose (or monitor) inflammation, neoplasia (particularly squamous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         carcinoma of the skin, oesophagus, lung and cervix), and skin and blood
w human or bovine calcium binding protein and related nucleic acid marker for inflammation, neoplasia, skin and blood diseases.

New human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide, useful for identifying anti-inflammatory compounds that inhibit its interaction with RAGE. WPI; 2000-303794/26.

Claim 2; Page 41; 132pp; English

novel receptor for advanced glycation end products) peptide (P1). The ENRAGE peptide binds to RAGE which is a member of the immunoglobulin the superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of ENRAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory inflammatory capic shock, endotoxaemia, or an autofimune or inflammatory disorder in which the recruitment of ENRAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The pure sequence represents the bovine CAAFI which shows homology to the human EN-RAGE N-terminal The present invention describes an isolated human EN-RAGE (extracellular amino acid sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide, useful for identifying anti-inflammatory compounds that inhibit its interaction with RAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (PI). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory lupus nephritis, septic shock, endotoxaemia, or an autoimmune or inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents the bovine corneal antigen which shows homology to the human EN-RAGE N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CCCAAAACCCTCCAGAACACCCAAAGATCAACCTACCATTGACAAAATATTCCAAGACCTG 183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21 ValGlyHisPheAspThrLeuAsnLysArgGluLeuLysGlnLeulleThrLysGluLeu 40

A novel bioactive metal RNA polypeptide (RNP) has a RNA component including the sequence AAT62568 and a polypeptide component having the sequence AAM01826, which is encoded by AAT62569. The RNP, or anti-RNP immunoglobulins, can be used to modulate and/or analyse angiogenesis and the vascular state of mammalian tissue, transfer genetic information in cells and selectively alter the nucleic acid content of cells. Leukocytes from pig's blood were cultured in medium, and the supernatant treated with NH4 sulphate at 35, 45 and 90% saturation to precipitate protein fractions. The residual supernatant was diltued to 45% NH4 sulphate saturation and concentrated by ultrafiltration using a 0.5 kD membrane. The retenate was purified to give 8 mg of product described as monocyto-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 GTGGGGCATTTCGACACCCTCAACAAGCGTGAGCTGAAGCAGCTGATCACAAAGGAACTT 123

CAAF1 belongs to the $100 protein family, which includes calcyclin, MRPB, and MRP14. Intracellular calcium ion concentration is one of the key factors for intracellular signal transduction. The calcium signals are transduced by various calciumbinding proteins, such as this protein. CAAF1 is normally expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human or bovine calcium binding protein and related nucleic acid a marker for inflammation, neoplasia, skin and blood diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Kimura
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Yamamura T,

eguamous epithelial cells, neutrophils and macrophages, but atypical epithelial cells are negative for CAAF1 and overexpression is observed is several types of cancer cells and neutrophils/macrophages infiltrating cancerous lesions. Detection of CAAF1 (using antibodies in usual immunoassays) can be used to diagnose (or monitor) inflammation, neoplasia (particularly squamous cell carcinoma of the skin, oesophagus, lung and cervix), and skin and blood diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATGACTAAGCTGGAAGATCACCTGGAGGGAATCATCAACATCTTCCACCAGTACTCCGTT

         This is a human chemotactic cytokine I polypeptide. The encoding polynuclectide, along with a vector and a host cell can be used for the recombinant production of the chemotactic cytokine. Cytokine agonists an antagonists can be used for the treatment of a patient requiring a chemotactic cytokine I and for the treatment of a patient requiring the inhibition of a chemotactic cytokine I polypeptide, respectively. The chemotactic cytokine is used to treat tumours, chronic infection, leukaemia and T-cell mediated autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S100 protein, human; treatment, cardiomyopathy; cardiac insufficiency; calcium-binding protein; calcium homeostasis; cardiac muscle; pumping apacity; myocardial cell; systolic calcium ion release; sarcoplasmic reticulum; cardiac disease; hypertension; rhythm disorder; valve defect.

                                                                                              This invention describes a novel composition for treating primary or secondary cardiomyopathy or cardiac insufficiency contains at least one secondary cardiomyopathy or cardiac insufficiency contains at least one from the contains or their mutants or fragments, or a gene transfer vector containing (II), optionally formulated with auxiliaries and/or carriers. (I) are calcium-binding protein involved in calcium homeostasis, so their overexpression in cardiac muscle will improve pumping capacity (and overaplession in cardiac muscle will improve pumping capacity (and overaplession in cardiac muscle will improve pumping capacity (and overaplession in calcium the heart. In cultured myocardial cells they increase the contraction and cardiac the sarcoplasmic reticulum (SR) and calcium calcium ion release from the sarcoplasmic reticulum (SR) and calcium caused by SR. (I) are used to treat cardiomyopathy (CMP) where inherited or caused by CMP) where inherited or caused by contactions and ischemic CMP caused by arteriosclerosis, dllative CMP caused by toxic/infectious disease, cardiac disease caused by rhythm disorders or valve defects, generally any condition associated with reduced contractile force. Unlike calmodulin, which is expressed this underlying defect in the sarcoplasmic reticulum (SR) that causes cardiac

Human, perlecan, retinol-binding plasma protein, calgranulin B, vaccine, ganglioside GM2 activator, saposin B, degenerative disease, glial cell, neurological disease, auto-immune disease, multiple sclerosis, toxicity,

Amino acid sequence of a human protein.

(first entry)

15-MAY-2001

AAB31911;

```
The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypoptide or polymucleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polymucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in general therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polymetide or polymuclecide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polymucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and phases). They may also be useful in cases of e.g. Alzheimer's and Parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in
                                                                                                                                                Human; perlecan; retinol-binding plasma protein; calgranulin B; vaccine; ganglioside GMZ activator; saposin B; degenerative disease; glial cell; neurological disease; auto-immune disease; multiple sclerosis; toxicity; Alzheimer's disease; Parkinson's disease; amyotrophic lateral sclerosis; rheumatoid polyarthritis; lupus erythematosus; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting, preventing and treating degenerative, neurological and autoimmune diseases, particularly multiple sclerosis, using specified polypeptides or related nucleic acid or ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Perron H;

The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypoptide or polymorleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GMZ activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a capmenative, neurological and/or auto-immune disease. The polymucleotides and polypeptides are used for diagnosis, prognosis, convention and treatment of multiple sclerosis (in its various forms and parkinson's diseases, amyotrophic lateral sclerosis, rheumaroid parkinson's diseases, amyotrophic lateral sclerosis, rheumaroid polyarthritis and lupus erythematosus, including use as vaccines and in general properties and in second control of sense or antisenses sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

or preventing an inflammatory disease in a mammal, and medical treatment of the mammal, where the treatment is based on the stage of the disease to be treated or prevented. Calgranulin C has antiinflammatory activity and can be used in gene therapy. The method is useful for diagnosing, treating or preventing inflammatory diseases, e.g. vasculitis (particularly Kawasaki disease), cystic fibrosis, chronic inflammatory disease) inflammatory archritis (e.g. psoriatic arthritis, rheumatory archritis) systemic onset juvenile rheumatorid arthritis or seronegative arthritis), systemic onset juvenile rheumatoid arthritis or seronegative arthritis), acute inflammatoin above the background of a chronic inflammatory disease, or an exacerbation of an already present disease. The method is also useful for diagnosing specific stages of inflammatory diseases with similar symptoms. The present sequence represents buman calgranulin C, which is used in the exemplification of the present

                                                                                                                                                    The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic systemic sollerosis, Sjogren s syndrome, vasculitis, sarchidosis, autoimmune haemolytic anemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central to rperipheral nervous system, demyelinating diseases of the dentral or peripheral nervous system, demyelinating puneuropathy, quillain-Barre syndrome and chronic inflammatory demyelinating polyneuropathy. This sequence represents a human PRO polypeptide of the

```

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antininflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antinflammatory, cytostatic, carebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder. The proteins and nucleotides are related to aberrant NF-kappaB requlation, cancer, aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndrome, hypohidroric ectodermal dysplasia, 'N-linked anhidrodic cetodermal dysplasia, immunodeficiency, viral infections, HIV-1, HITV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell cetodermal dysplasia, sthuma, atheurosclearosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to organ transplant conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to oberrant signal transplant conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions entated to organ transplant cefected and disorders cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human protein which is such as the present sequence is that of a human protein which is such as the present sequence is that of a human protein which is such as the present sequence is that of a human protein which is such as the present sequence is that of a human protein which is such as the present nvention. Note: This sequence does not appear in the specification but
